

INTERACTIVE MAP

DSN started with a principle that we would not re-create any existing technology we could leverage. Thus, the first map leveraged ArcIMS licensing fees and work provided by Region 10 of the EPA. This option is no longer available, in part because of other technology changes.

The EPA and WQCD have provided us \$20,000 this year to upgrade the map to include all the features we could not fund the first round. Our map will be

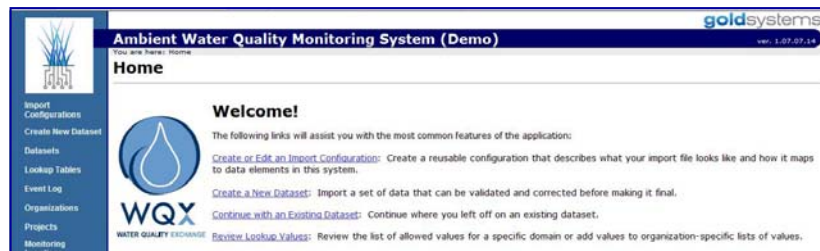

transitioning from the current map to a GoogleEarth powered map, starting in October or November, with the first phases on-line by the end of 2009. The full transition will be Additional enhancements are anticipated to be completed by December 2009. Thanks for your patience during this time.

The GoogleEarth Map will be more powerful and user-friendly than the current map. Water data will be available for

download and analysis from each station.

Pending funding and an available software license, we also hope to develop and support a new ArcServer map application to provide additional functionalities and for the ability to link our map server to desktop GIS systems. We will begin work on this after the Google Map application is running.

We are grateful to the EPA and WQCD for supporting this aspect of DSN.

DATABASE

The day we have all been waiting for is here, the big luminous WQX Transition has arrived (hear the music to JAWS).

What is the WQX transition? WQX is the new pathway for data to be uploaded to EPA National STORET. The old way of getting data in a format for this purpose involved modified Oracle software, templates and other complicated tools. This old pathway will no longer be supported by EPA September 2009. To be clear, the National STORET repository is not going away, just the tools to get data into that repository.

The DSN will be utilizing the Ambient Water Quality

Monitoring System (AWQMS) developed by long-time partner Gold Systems. AWQMS is a web-based data management system for ambient water quality data. It was specifically designed for compatibility with the Water Quality Exchange (WQX) - the new mechanism for exchanging water quality data between the EPA and its partners. Transition for DSN data will move all existing data from the old system to the new. This will result in a few changes to our templates but ultimately the new system will be more user-friendly. DSN will be making this transition in August and September.

The new CDSN version of

AWQMS is now officially available to upload and export your data. The QA/QC process has begun for all existing organizations. Please keep checking our web site (for frequent updates and additional training materials and information. We appreciate your patience throughout the transition.

Please check out the new AWQMS analysis tools. They are slick! Now that the data has been migrated we have begun the real work on redesigning our interactive web map.

We are pleased that the data migration portion of the transition has been achieved for \$10,000.

DATA SETS IN DSN SINCE CLOSE OF LAST GRANT

- ☞ Two Years of South Platte Coalition for Urban Rivers
- ☞ Barr Lake
- ☞ Denver Health Department
- ☞ For a full list visit www.cdsn.awqms.com

We have sent our annual "data update" call to active map or database generators. Please let us help you keep information on DSN current and relevant for all users!

NEW WEB SITE

The CWQMC is developing a new web site. The web site is a critical tool for networking and communication. This is the place we provide training guidance documents, SWAP fact sheets, SWAP registration, CWQMC administration documents such as our Charter, Annual work plan, Outreach Plan, and meeting minutes. This is where we link users to our products, including our map and water database.

The new site is now parked at www.ColoradoWaterQuality.org. It will have features and functionalities the old site did not, such as the ability to make a secure on-line donation.

Thanks to all who provided the old web site. Complete transition to the new site will be accomplished as soon as we have raised the \$4,500 needed to finish enhancing the site. A major enhancement will be a searchable (spatially and by keyword) Colorado Water Community Directory. **If you are working in any aspect of Colorado's Water Resources we need to include you!** To be included in the directory, contact our coordinators at cwqmc@ColoradoWaterQuality.org

DSN WISH LIST

THREE WAYS TO SUPPORT DSN

- ☞ **DATA**
For the database
- ☞ Meta-data for the map
- ☞ Priorities, needs and concerns in your local SWAP

CASH

Contribute funding, at a level meaningful for your organization. What are you saving? What are you gaining? What is that worth? This supports DSN's hard costs such as server hosting time, system operation and updates and part-time coordinator. Donations for SWAP sponsorships are welcome too. **ANY AMOUNT HELPS!**

INKIND

Share your expertise & join the: **Leadership Team**
Accountability, Direction, Recruitment, Resources

Outreach Committee
SWAPS, marketing, membership needs assessments, web site, presentations, newsletter

Mentoring Committee
Skill matrix of resources, connecting need with mentor, workshops

Technical Advisory
Technical aspects of map and database, training, data calls, documentation, tracking.

ALL COMMITTEES MEET SIX TIMES PER YEAR OR AS NEEDED

CONTACT CO-CHAIRS:
Vic Lucero, 303.255.7771
Barb Horn, 970.382.6667

DATA SWAPS

Picking up where we left off with SWAPS, the next round of SWAPS will begin this fall in the Colorado Basins (pending Rule Making by the WQCD). This includes SWAPS in the geographic areas of Dillon, Glenwood Springs, Craig and Grand Junction.

In the Spring of 2011 we will visit the Gunnison and San Juan Basins and the general towns of Montrose, Cortez, Durango and Pagosa Springs.

This SWAP schedule follows the Water Quality Control Division's June Basin Rule Making Hearings. The Basic Standards Hearing will be in June 2010. June 2011 will be the Gunnison/San Juan—the first basins where nutrient criteria and potential biocriteria determined in the 2010 hearing will be applied.

DSN SWAPS are place-based exchanges of monitoring activities, concerns, needs priorities specific to the Basin. Local entities help

determine the agenda, which can include presentations from recent efforts and the like. Also, included could be training on how to use the DSN map and database.

SWAPS are open to all but target anyone involved in watershed management of that basin. DSN Swap discussions are all summarized in basin fact sheets and posted on the CWQMC web site: <http://www.coloradowaterquality.org/swapfacts.html>

Watch for information for the SWAP in your area.

MENTORING COMMITTEE

The CWQMC Mentoring kicked off late this spring. They are on task to developing a process to document the type of assistance available; a list of possible funding sources; and document ways entities can access plans or

monitoring study designs, new monitoring or data analysis methods, and methods of implementation of new regulations. We will try and meet any need requested by a member. This committee will also coordinate larger training

and mentoring. Mentoring topics collected by the membership last year include evaluating data sets for gaps, analyses, and/or interpretation; and help with development of QAPPS, SOPS, and watershed plans; water data formatting and upload assistance; and others.

DSN TRAINING OPPORTUNITIES

DSN will be providing Non Point Source Project Sponsors initial training as part of the Water Quality Control Division Sponsor Training. At that time, Project Sponsors will be provided templates and guidance documents. The DSN Project Coordinator will be available to assist each sponsor individually for actual uploads.

DSN will be providing a WQX transition training at the Sustaining Colorado Watersheds Conference in Vail, Oct. 7-9. WQX training may be provided in the Fall Colorado Basin SWAPS if that is what locals request. Other training will occur one-on-one with priority data sets.

(CONTINUED)NEW DSN PROJECT COORDINATORS

To date, they have streamlined our accounting and fiscal tracking and reporting for all involved entities, not an easy task. They have established our new web site, uploaded all the new data sets, conducted the research and developed the strategy and work plan for the map upgrades, renegotiated our hosting contract with Gold Systems, worked on our membership database, attended committee meetings, and done the leg work for the WQX transition.

They have lots of ideas and are committed to the CWQMC. The CWQMC is very lucky to have two talented and dedicated individuals, welcome Lynn & Jeff!
